

Fever Coach

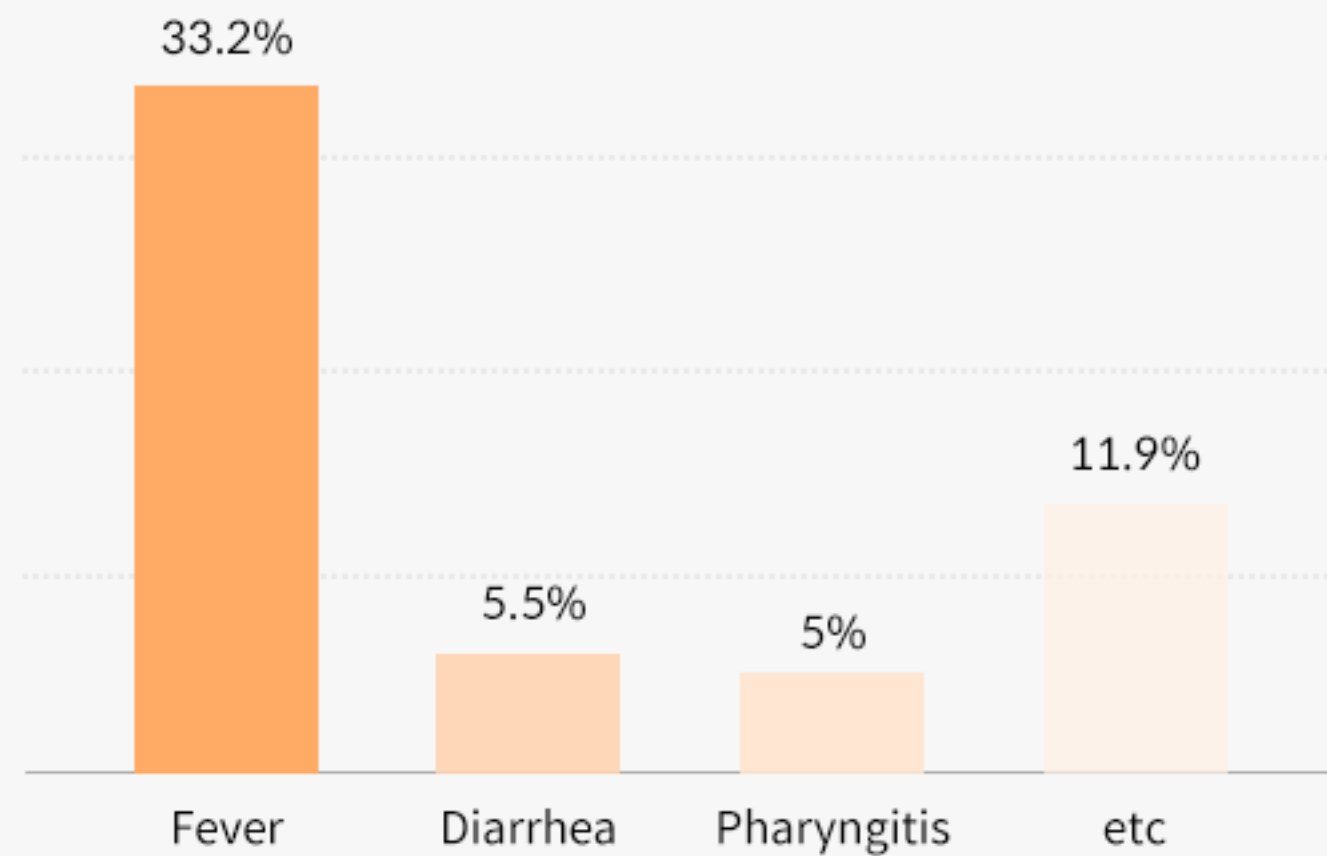

Personal health solution for my child

With the heart of a parent raising a child

Our doctors created this APP solution
to help the worried parents whose child is having fever

When the child has a fever, parents panic or becomes anxious, and would go to the ER even when it is a mild fever.

출처 : 소아전문응급의료센터 이용 형태의 특징과 고찰: 2년 간의 단일기관 연구

Most pediatric patients who visit the hospital at night are children with **fever**. In most cases, their fever would have been brought down if given the **right amount of antipyretic at the right time**.

However, even in such **urgent** and **confusing situations**, medical information about fever and its remedy are haphazardly given.

What parents need the most in this situation is **thermal management guidelines tailored to individual circumstances**.

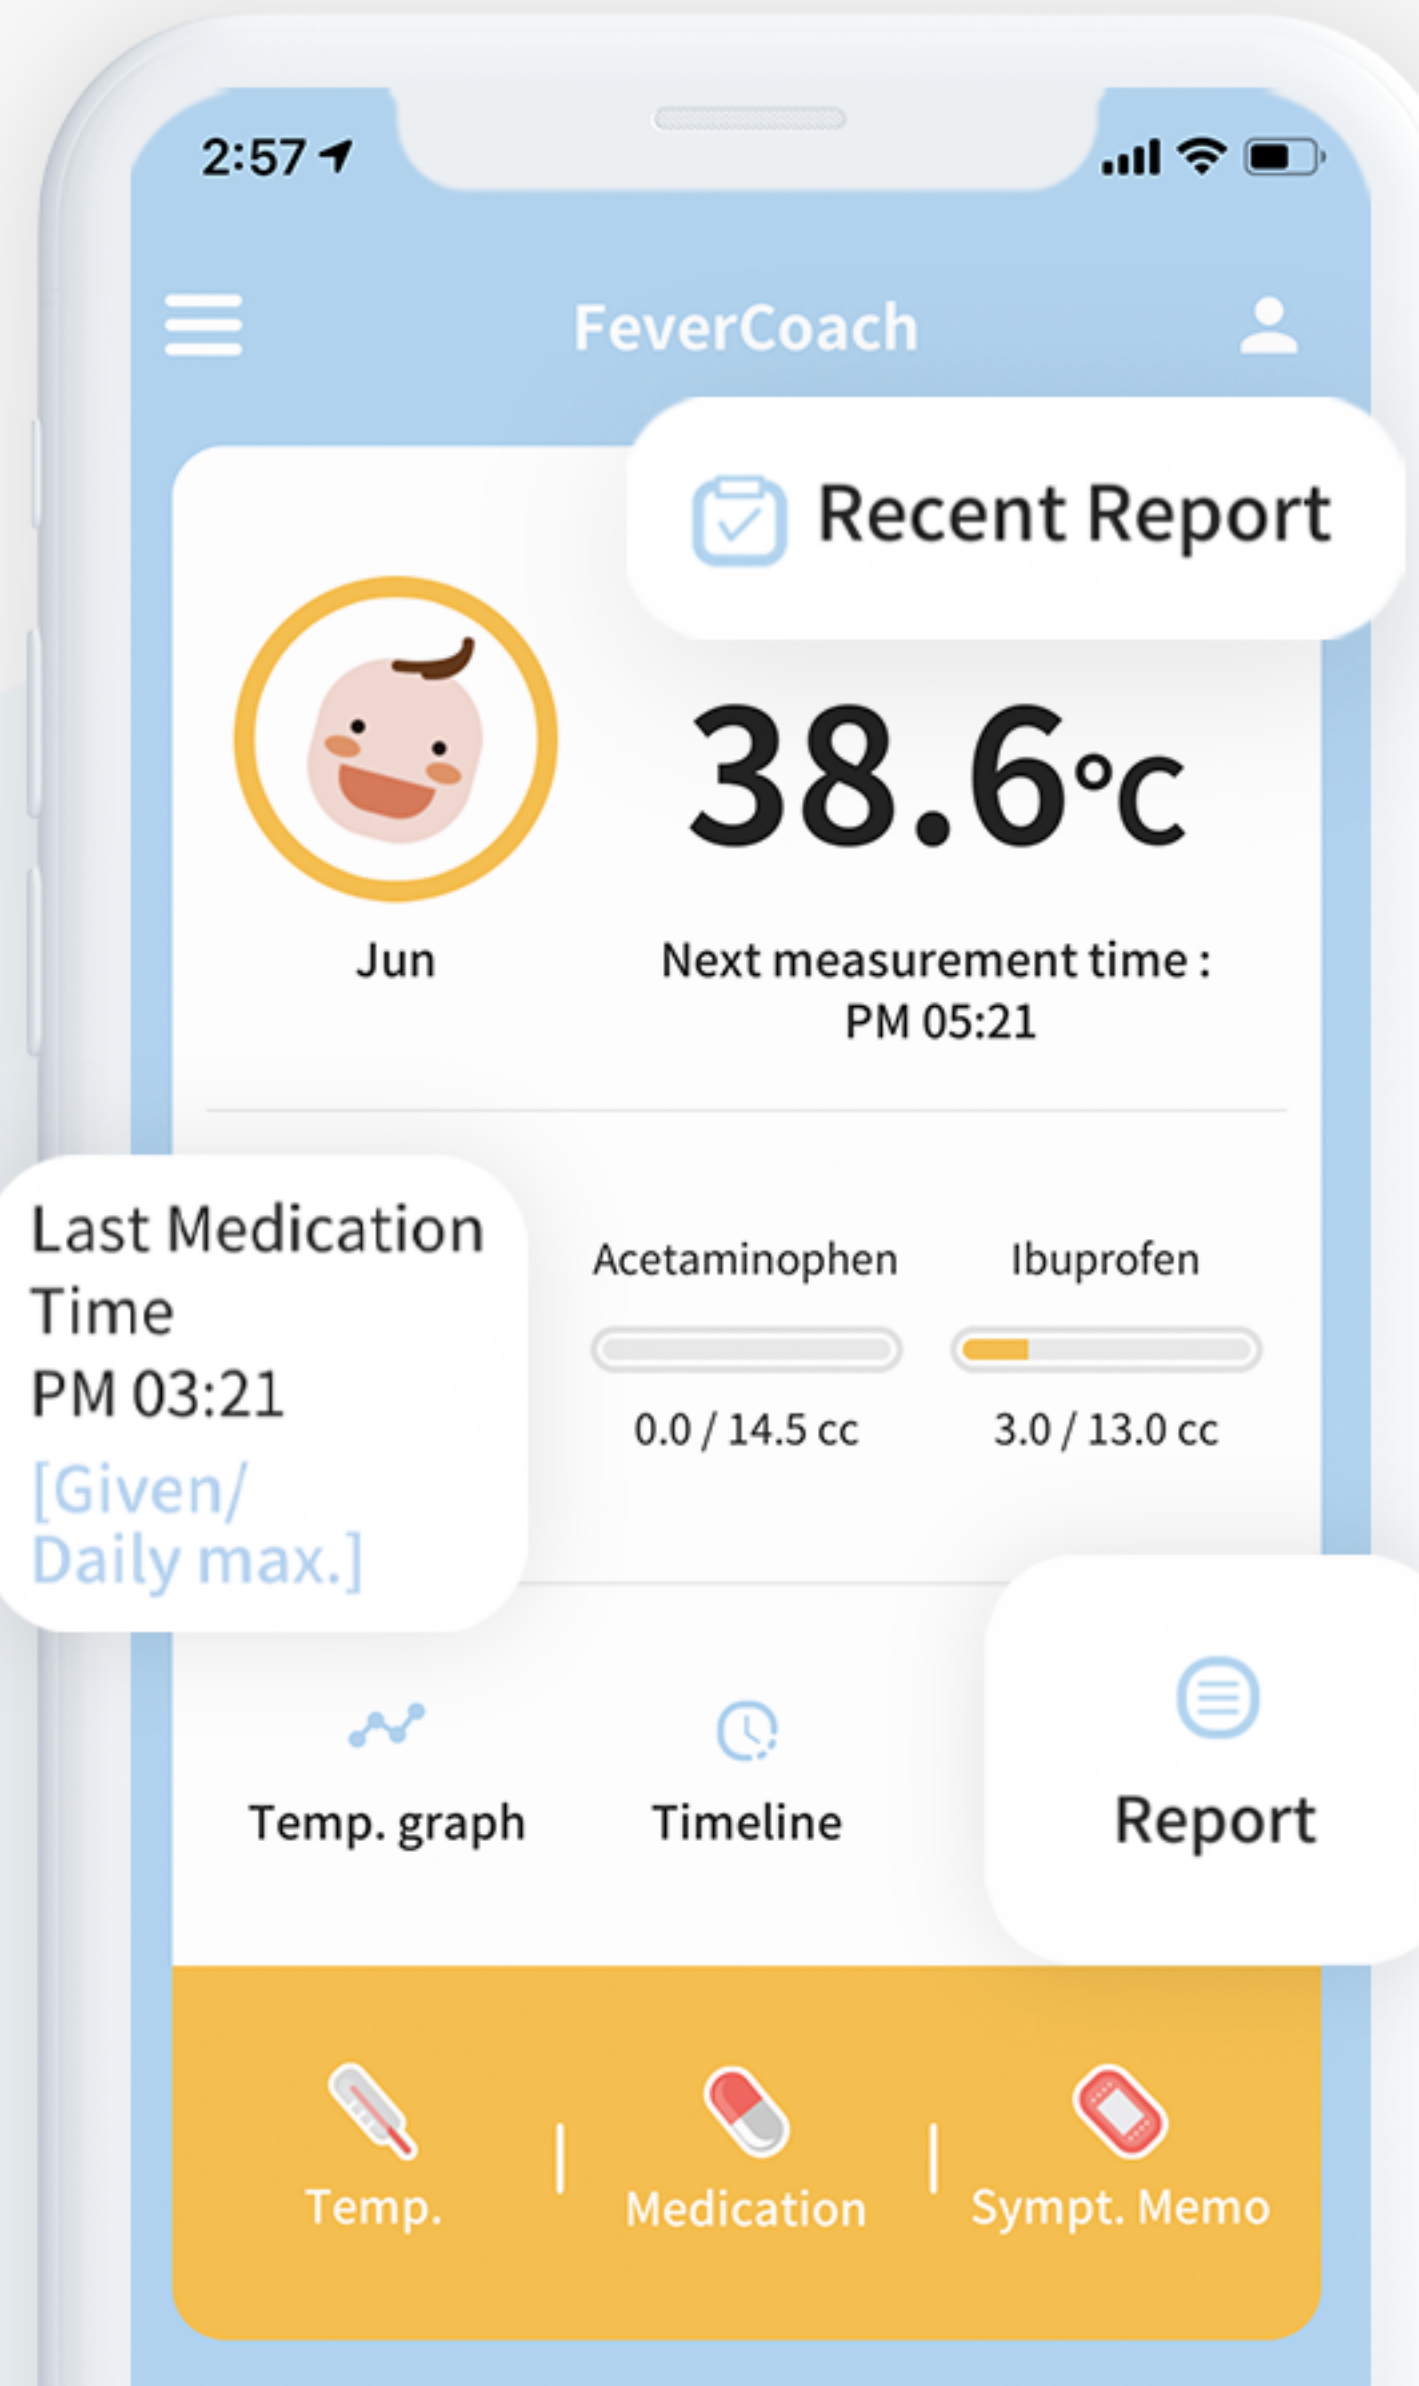

SERVICE GOAL

Perfect personalized thermal management app
by your mobile attending physician

Like an attending physician who knows your child's health better than anyone, we kindly provide detailed instructions on managing the fever of your child.

Hello, My FeverCoach!

Main Page

Know when and how much antipyretic you gave the child

Measuring the proper dose of antipyretic could be difficult. We help you to give the right dosage according to the child's body weight.

Instructions from the Fever Coach's Attending Physician.

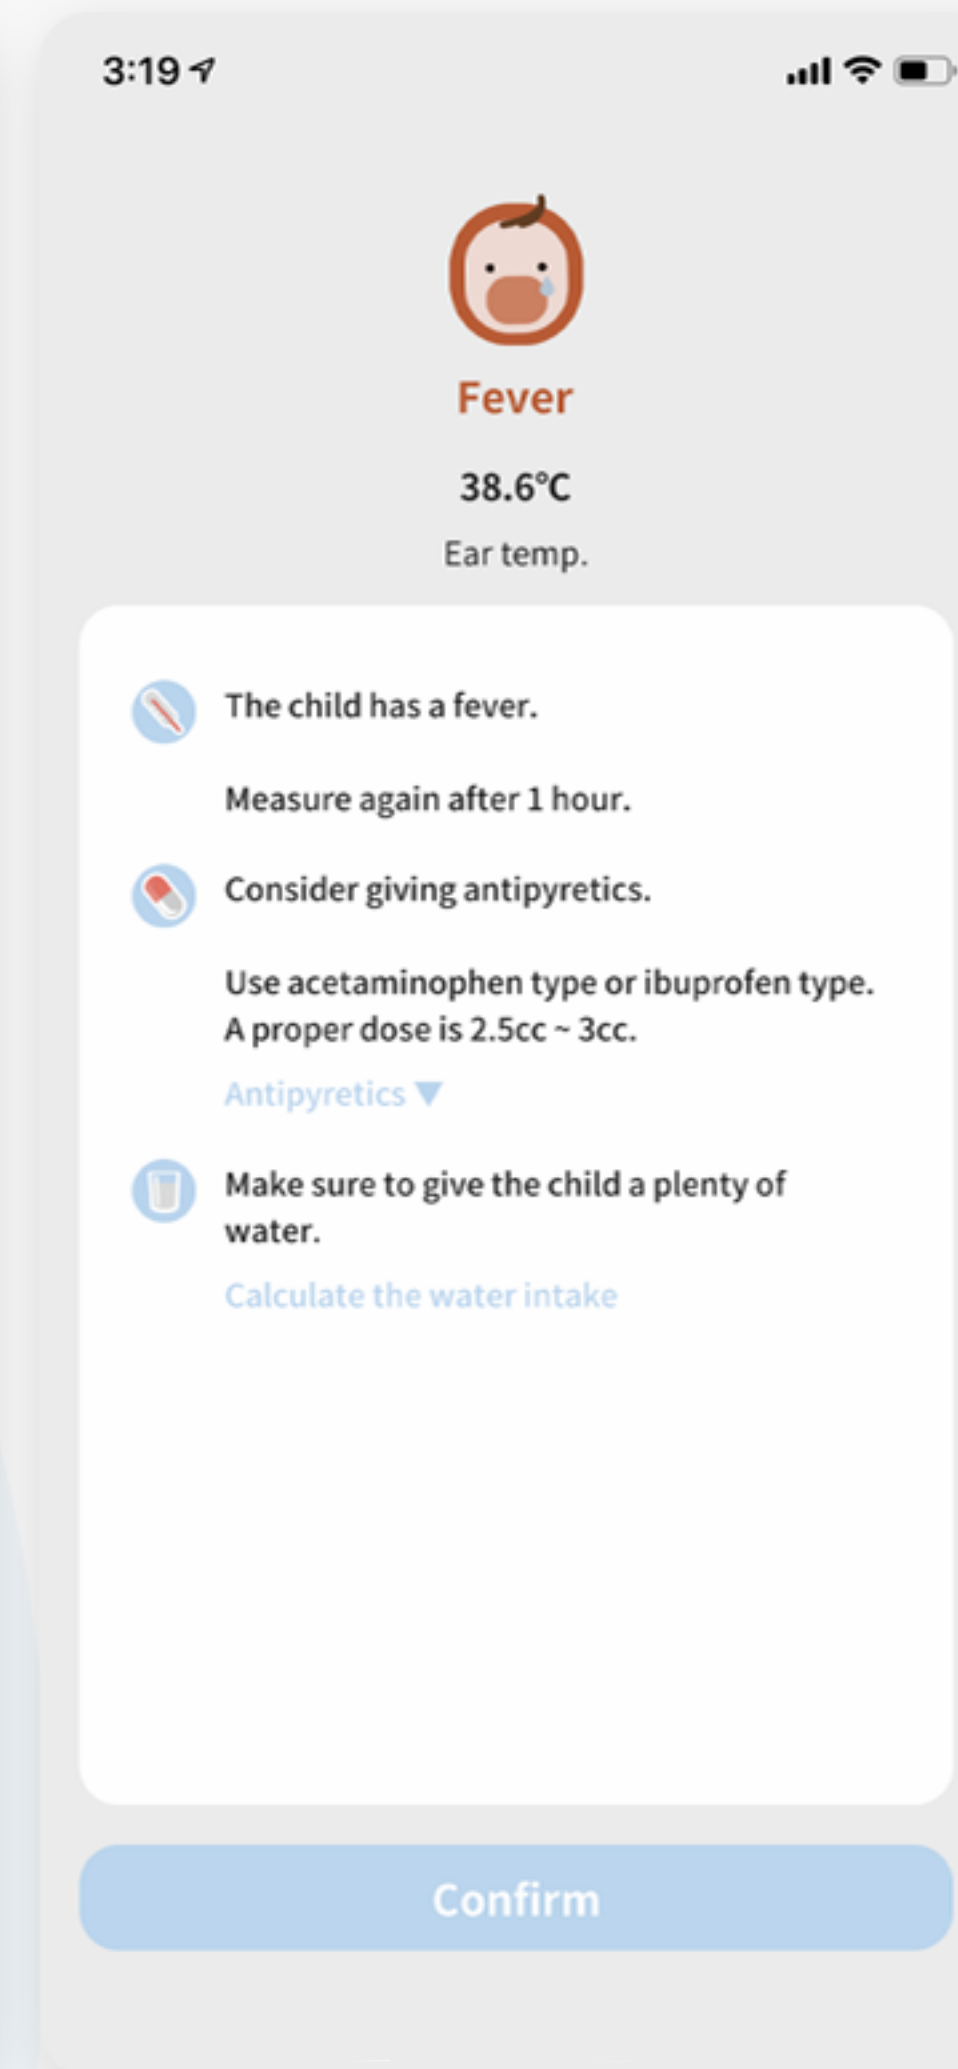

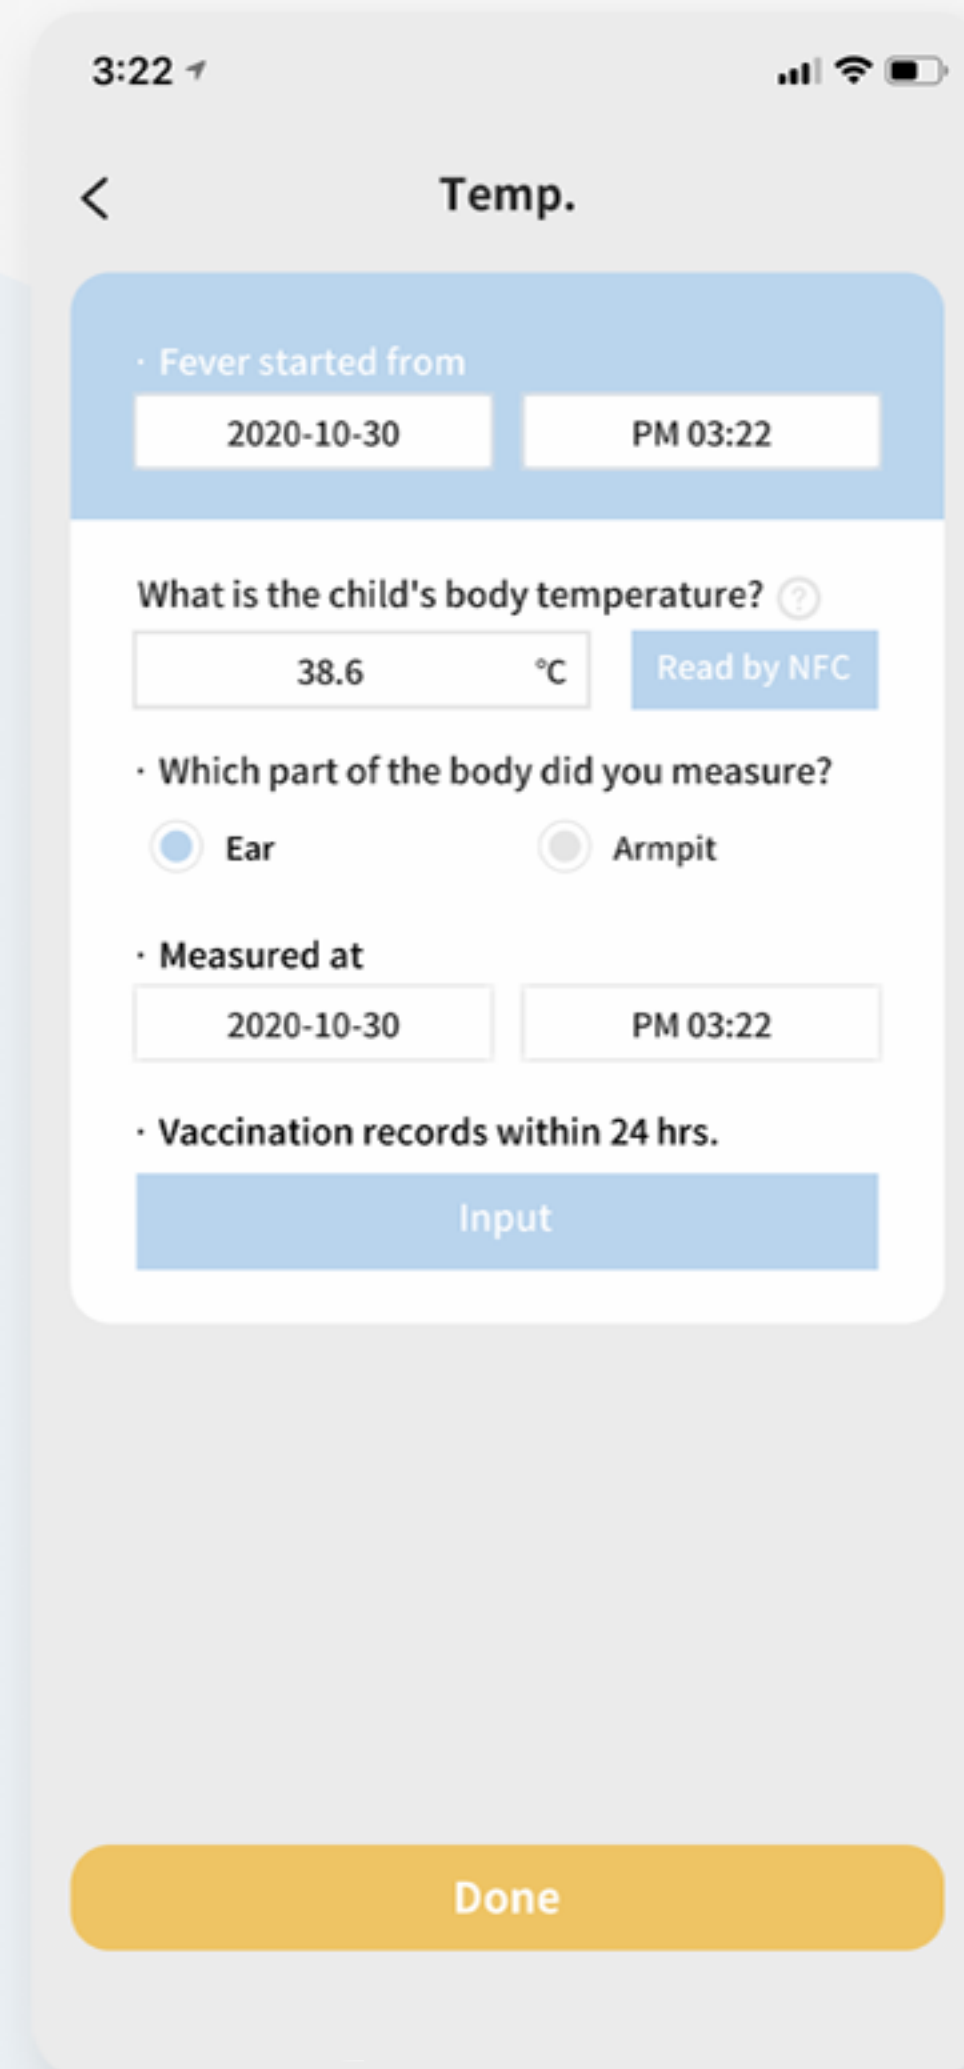

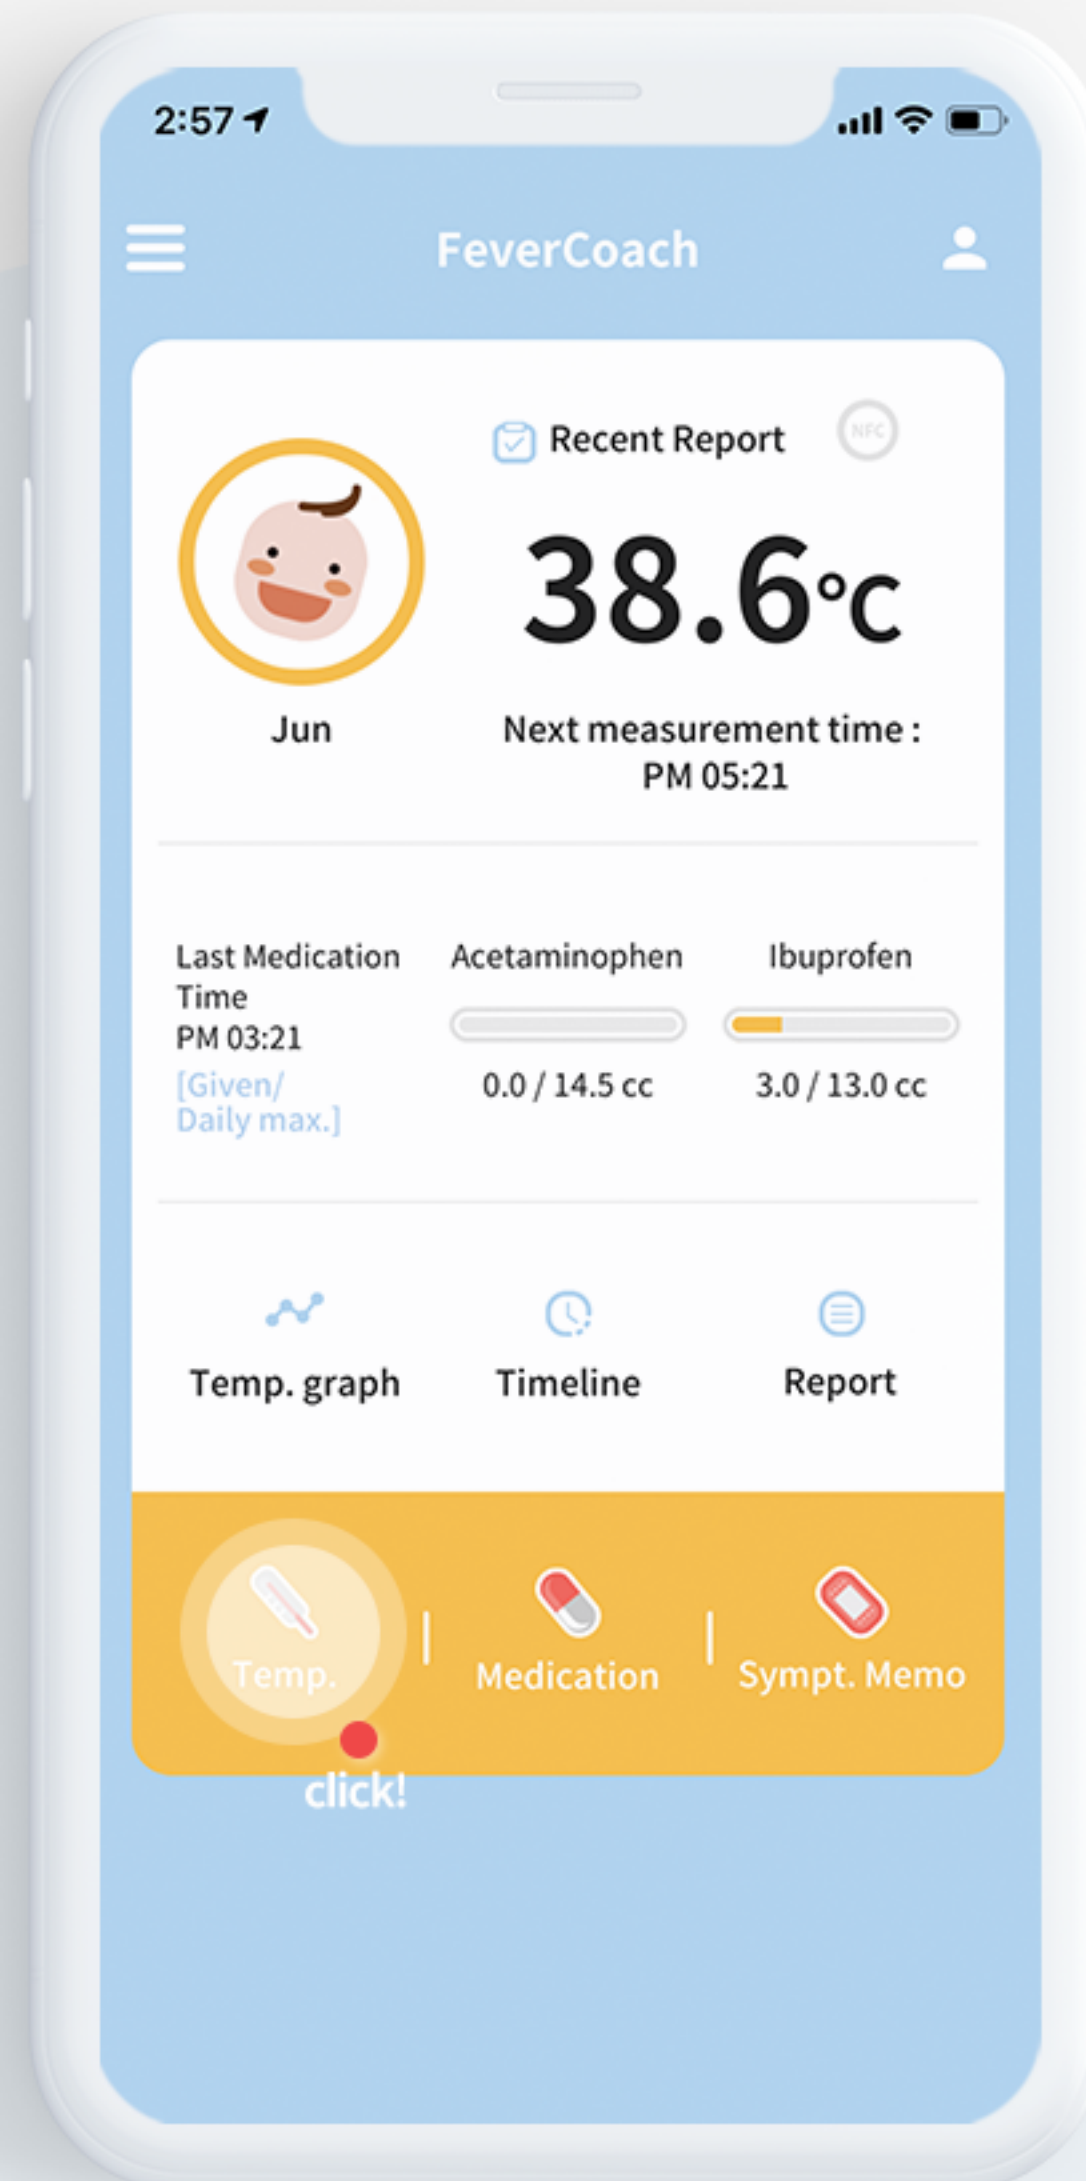

Check your child's condition and what you need to do for them

Use this comprehensive Report in consultations.

This detailed report of your child's health and condition can facilitate an in-depth consultation with the doctor.

FeverCoach Care

My child's fever management 🤒

When your child has a fever, calmly enter their body temperature. You can **handle the fever effectively** with our **organized instruction report** for your child!

Is it difficult to measure the temperature when they are asleep? You can easily **enter the temperature** by connecting the **FeverCoach NFC thermometer**, comfortably attached to the child.
